

Case study:

- Steve aged 47, was diagnosed with recto-sigmoid carcinoma & was prepared for an anterior resection +/- temporary ileostomy.
- Steve was overwhelmed, stressed and anxious. You provided psychosocial support and referred him to relevant MDT members.
- Steve was unsure about having his operation but after discussion with his surgeon and other staff, Steve agreed to proceed with the surgery.

Question:

What are the roles & responsibilities of three (3) operating room nurses in maintaining patient safety during the intra-operative period?

Need:

- one and half pages writing
- APA references
- 3 slides for presentation
